Introduction

Why Wynn's®?

Your vehicle is an investment requiring regular maintenance.

As an alternative to mechanical repairs, many of your vehicles problems can be resolved or prevented without the dismantling of parts using Wynn's® treatments that are: efficient, affordable and easy-to-use.

Wynn's® treatments are designed to meet the specific requirements of modern engines, while optimising and protecting older vehicles.

Over the last 70 year's Wynn's® global R&D Division has worked continuously to remain at the forefront of cleaning and lubricating technology.

Wynn's® extensive knowledge of the automotive market and its ever-changing requirements form the basis of our product development. Wynn's manufacturing plants operate according to an ISO 9001 certified quality system.

Wynn's® global distribution network covers all seven continents.

Over 70 years' Experience!

Wynn's® traces its history to 1939 when Chestien Wynn discovered a formula he named "Wynn's® Friction Proofing" Oil. This surface treatment for metal actually changed the chemistry of the metal, making it harder and better able to withstand friction and wear.

Seventy three years following the introduction of that single product, Wynn's® has grown to become a leading global manufacturer and marketer of innovative automotive specialty products designed to clean, protect & lubricate regardless of whether your car is new or old.

FUEL SYSTEM
CLEANER**

325ml

Prevents Future Deposit Build-up

ADD TO PETROL EVERY 10,000 km

Complete Fuel System Cleaner - PETROL 325 ml

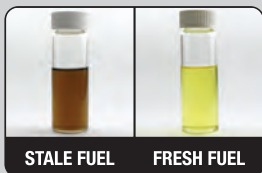

Today's vehicles have sophisticated fuel systems to achieve their optimal performance, reduce fuel consumption and emissions. These highly tuned fuel systems are more susceptible to fouling from gums and varnishes that form during every day driving.

Like cholesterol on the artery, this harmful fouling turns to carbon and builds up in fuel injectors, intake valves and combustion chambers which hinder engine performance & diminish the overall driveability of the car.

Wynn's® Complete Fuel System Cleaner has been formulated utilising the latest Wynn's® global technology to totally clean, protect & lubricate the entire fuel system to keep the heart of your vehicle operating at peak performance.

Features & Benefits:

- Fuel Stabiliser, keeps fuel fresh up to 6 months
- Easy to Use one shot treatment
- Works as you drive to improve engine performance & lower fuel consumption
- Prevents future deposit build-up for up to 10,000km
- Totally cleans, lubricates & protects entire fuel system (injectors, carburettors & valves)
- Protects the fuel system against corrosion, caused by Ethanol (E10) fuels
- Suitable for Conventional & Direct Injection Systems including Turbo Charged
- Catalytic converter, oxygen sensor & E10 safe

**FUEL STABILISER
KEEPS FUEL
FRESH UP TO
6 MONTHS**

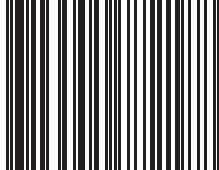

Directions for Use: Add entire contents of bottle to fuel tank, preferably before filling with petrol to ensure thorough mixing of product. Treats up to 80 litres of petrol.

Improves Fuel Economy & Performance

ADD
TO

PETROL

EVERY
5,000 km

Injector Cleaner

– PETROL 325 ml

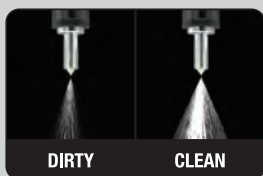

During every day driving deposits form on the tips of fuel injectors. These deposits can adversely affect the ideal spray pattern from the injector nozzle, which is essential for optimum vehicle performance.

Deposits are particularly troublesome in today's city, stop & start driving environments, with the result being dirty injectors, irregular idling, loss of power, difficult cold start. These deposits can start to occur after only 2,400 km's of driving.

Wynn's® Petrol Injector Cleaner has been formulated to clean dirty injectors and provide the following benefits.

Features & Benefits:

- Fast acting concentrated Petrol Injector Cleaner
- Easy to use, one shot treatment
- Cleans injectors as you drive
- Improves engine performance & lowers fuel consumption
- Suitable for Conventional & Direct Injection systems including Turbo Charged
- Catalytic converter, oxygen sensor & E10 safe
- Prevents deposits forming for up to 5,000km

**DIRTY INJECTORS
CAN REDUCE
FUEL ECONOMY
BY 15%**

Directions for Use: Add entire contents of bottle to fuel tank, preferably before filling with petrol to ensure thorough mixing of product. Treats up to 80 litres of petrol.

Power Boost

– PETROL 325 ml

As the world makes the change to unleaded petrol's, Wynn's® Power Boost is the smart solution to deliver both high-octane performance and valve-seat recession protection.

Modern engines are designed with higher and higher compression ratios which demand higher Octane Number fuel. The Octane number is often referred to as Research Octane Number (RON). If a lower than required RON fuel is used, the engine can have pinging or detonation problem due to auto-ignition.

Today's unleaded fuels don't provide the same level of lubrication for engine valves which can cause wear of the valve seating – or valve-seat recession (VSR) and lead to increased exhaust emissions, poor idling, and the loss of power. The potential for valve-seat recession increases with smaller engines running at higher speeds.

Features & Benefits:

- Increases the octane number (RON) by up to 5 units
- Provides upper cylinder lubrication for up to 5,000km
- Increases horsepower & protects valves
- Prevents valve seat recession by forming a shielding layer on the valve seats, replicating the effect of leaded fuel
- Overcomes pinging or knocking noise in the engine
- Catalytic converter, oxygen sensor & E10 safe

UPPER CYLINDER LUBRICANT

Directions for Use: Add entire contents of bottle to fuel tank, preferably before filling with petrol to ensure thorough mixing of product. Treats up to 80 litres of petrol.

FORMULA**
OCTANE BOOST

Boosts octane rating by up to 7 (RON) units

39g/L Methcyclopentadienyl Manganese Tricarbonyl **500ml**

39g/L Methcyclopentadienyl Manganese Tricarbonyl 500ml

Race Formula Octane Boost – 500 ml

Engines with higher compression require higher octane number fuels. The higher the octane number, the more compression the fuel can withstand before detonating.

When you can control the point at which the fuel ignites, maximum & improved performance of the engine can be achieved with the elimination of power robbing knocking and pinging due to low octane fuel.

Wynn's® Race Formula Octane Boost is a premium high performance treatment formulated utilising the latest Wynn's® global technology to increase the Octane Rating (RON) of petrol fuel by up to 7 units, maximising your engines performance.

RON before treatment	Improvement after 500ml 43905 Wynn's® Race Formula Octane Boost (typical)

325ml

Lubricates & Protects Diesel Fuel Systems

ADD TO DIESEL EVERY 10,000 km

Complete Fuel System Cleaner - DIESEL 325 ml

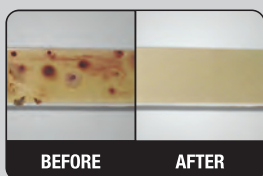

Modern diesel fuel is very different from what was available even 5 years ago, ultra low sulphur diesel (ULSD) now means that diesel engines aren't receiving the same level of lubrication protection.

Higher engine temperatures which in turn causes higher fuel temperatures creates the ideal breeding ground for microorganisms, such as bacteria, algae and fungi commonly referred to as diesel bug. These microorganisms feed off the hydrocarbons in the diesel fuel, creating a waste product that is corrosive and harmful which can clog the fuel filter resulting in hesitation and engine stalling.

Wynn's® Complete Fuel System Cleaner has been formulated utilising the latest Wynn's® global technology to totally clean, protect & lubricate the entire fuel system to keep the heart of your vehicle operating at peak performance and contains a biocide to kill & prevent the growth of diesel bug.

Features & Benefits:

- Totally cleans & protects diesel fuel system components
- Easy to use one shot treatment
- Works as you drive to improve engine performance & lower fuel consumption
- Added biocide kills and prevents algae, bacteria, and fungus in fuel which can lead to filter blockages
- Prevents future deposit build-up for up to 10,000km
- Lubricates pumps & injectors which compensates for the reduced lubrication of low sulphur diesel
- Suitable for Common Rail & Indirect Injection Systems, Bio-Diesel & Safe for DPF & other emission controls

**PREVENTS FILTER
BLOCKAGES CAUSED
BY HARMFUL ALGAE
& BACTERIA**

**EVERY
5,000 km**

Injector Cleaner

- DIESEL 325 ml

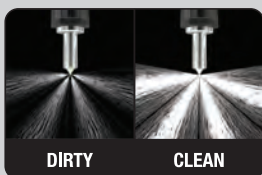

In order for a vehicle to perform as it was intended, it is essential that the injectors remain clean and free of build-up. Deposits on the fuel injectors can accumulate rapidly due to poor diesel fuel quality. These deposits can adversely affect the ideal spray pattern from the injector nozzle, which is essential for optimum vehicle performance.

These build-ups directly affect the engine power, fuel consumption, emissions (black smoke) and the general performance of the vehicle.

Wynn's® Diesel Injector Cleaner has been formulated to clean dirty injectors and provide the following benefits.

Features & Benefits:

- Fast acting concentrated Diesel Injector Cleaner
- Reduces harmful black exhaust emissions
- Improves engine performance & lowers fuel consumption
- Suitable for Common Rail & Indirect Injection Systems, Bio-Diesel & Safe for DPF & other emission controls
- Prevents deposits forming for up to 5,000km

**DIRTY INJECTORS

Engine Flush

– 325 ml

With time even the best engine oil deteriorates and contaminates the engine with gums and varnish deposits that a simple oil change just cannot remove. Any new oil may be compromised and be contaminated by deposits left behind.

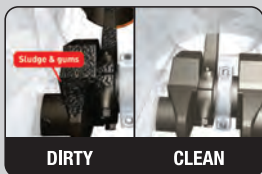

Extended service intervals are placing higher demands on today's engine oils, making it now even more important to ensure that the new oil is given the optimum chance to protect the engine.

Most engine flushes are solvent-type products, they tend to reduce the lubrication of the oil. If this type of flush is left in the engine too long mechanical damage can occur and engine seals can be affected. The damage may not be visible but it's irreversible.

Wynn's® Engine Flush has been formulated to gently dissolve and remove internal engine contaminants by suspending them in a high level of dispersants. The non-solvent formula assures maximum drainage of the contaminants with the used oil, thereby minimising new oil contamination.

Features & Benefits:

- Prepares engine prior to Oil & Filter Change
- Dissolves varnish, sludge and other contaminants from vital engine parts
- Prepares engine to optimise new oil & filter life
- Solvent Free, will not damage seals
- Recommended for new or old petrol, diesel & LPG engines

**EXTENDS
ENGINE LIFE**

Directions for Use: Add entire contents of bottle to engine oil. Run engine at idle speed for 15 minutes minimum. For particularly dirty systems the Wynn's® Engine Flush can be left up to 24 hours in the system. With engine turned off, drain old oil while engine is still hot. Install new oil filter and add new oil. Use with each oil change to prevent deposit built up.

**100,000km +
ENGINE
TREATMENT**

325ml

Restores Compression & Engine Performance

ADD TO ENGINE OIL

100,000km + Engine Treatment - 325 ml

As the kilometres increase on your car, wear and tear on engine components is a common theme.

Worn piston rings can cause oil by-pass to the combustion chamber where it will burn causing exhaust smoke & increased oil consumption.

Wynn's® 100,000km + Engine Treatment has been formulated with chemical polymers and viscosity index improvers to increase the thermo stability of the oil over a broad range of operating temperatures. This improves sealing between the piston ring and cylinder wall as well as taking up slight wear between valves and guides, the most common oil loss areas. Due to the feature of high temperature viscosity improvement, oil loss around main oil seals is also reduced.

Features & Benefits:

- Reduces exhaust smoke, oil consumption, engine noise & wear
- Restores compression & engine performance
- Neutralises acids formed by combustion blow-by
- Compatible with all mineral & synthetic oils
- Recommended for Petrol, Diesel & LPG engines, safe for Catalytic Converters, DPF & other emission controls

**REDUCES
EXHAUST
SMOKE**

Directions for Use: Bring engine to operating temperature and switch off. Add entire contents of bottle to engine oil. Can be used at or between oil changes. One bottle treats up to 6 litres of engine oil.

Reduces Friction & Wear

**ADD
TO ENGINE OIL**

Engine Tune-Up & Oil Stabiliser - 325 ml

Valves must open and close with proper timing to maintain engine performance. Smooth operation of the valve lifters is critical to this function. Oil-filled hydraulic valve lifters can become noisy if the oil feed to the hydraulic lifter is blocked. Deposits and oil contamination can cause sticking parts and noisy lifter (ticking) operation.

Wynn's® Engine Tune-Up & Oil Stabiliser is an oil additive, specifically formulated to help dissolve these deposits that impede oil flow and lifter operation to restore engine performance and power.

The oil stabiliser extends oil life by preventing oil oxidation and premature thickening of the oil.

Features & Benefits:

- Quietens noisy valve lifters & reduces ticking noise on start-up
- Prevents formation of black sludge and deposits
- Prevents oxidation and premature thickening of the oil
- Compatible with all mineral & synthetic oils
- Recommended for Petrol & LPG engines, safe for Catalytic Converters, DPF & other emission controls
- Suitable for Diesel Engines to extend oil life

**QUIETENS
NOISY VALVE
LIFTERS**

Prevents Messy Oil Stains

**ADD
TO ENGINE OIL**

Engine Stop Leak

- 325 ml

Proper engine lubrication is essential for a reliable, well-running vehicle. If you notice black oil stains on the floor of your garage or driveway you know you have a problem! Minor oil leaks have the potential to become a major problem if not fixed.

Two of the most common causes of rapid oil loss are external oil leaks and internal oil consumption. Wynn's® Engine Stop Leak has an improved, dual action formula that reduces oil loss caused by both internal consumption and external leaks.

This formulation improves the viscosity index and high temperature viscosity, controlling internal oil consumption while it conditions and gently swells rubber seals and gaskets to stop and prevent external oil leaks.

Features & Benefits:

- Prevents messy oil stains
- Rejuvenates dried shrunken rubber seals, gaskets & O-rings
- Stops & prevents leaks
- Compatible with all mineral & synthetic oils
- Recommended for Petrol, Diesel & LPG engines, safe for Catalytic Converters, DPF & other emission controls

**STOPS &
PREVENTS
LEAKS**

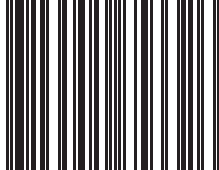

Directions for Use: Bring engine to operating temperature and switch off. Add entire contents of bottle to engine oil. Can be used at or between oil changes. One bottle treats up to 6 litres of engine oil.

Radiator Flush

- 325 ml

Cooling system failure and overheating of the engine is the leading cause of mechanical breakdowns. Rust, grease, sludge and scale build-up all contribute to the likelihood of cooling system failure.

By not using a dedicated flush damaging debris remain in the cooling system, slowly deteriorating internal components and seriously impairing the proper function of the radiator & cooling system.

Wynn's® Radiator Flush safely removes rust, grease and scale from the entire cooling system ensuring the new coolant works at its maximum potential, not having to work against a dirty system that can shorten coolant life. Wynn's® Radiator Flush contains no harsh acid or alkali compounds and will not attack cooling system components.

Features & Benefits:

- Fast acting cooling system cleaner that removes rust, grease, sludge & scale
- Prepares cooling system to optimise new coolant life
- Effectively restores coolant flow & heat transfer
- Compatible with water & glycol, anti-freeze/anti-boil coolants
- Compatible with cooling system components

**CLEANS TO
PREVENT
OVERHEATING**

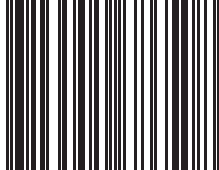

Directions for Use: Drain radiator & refill with fresh water. Add entire contents of bottle to radiator & replace radiator cap. With heater on, run engine for 10 minutes. Stop engine and open cooling system drain. Start engine. With engine idling, flush radiator with water until clear. Stop engine, close drain plug & refill radiator with recommended coolant. Contents treats a cooling system from 6 to 12 litres. To prevent & stop cooling system leaks use Wynn's® Radiator Stop Leak.

Protects Against Coolant Loss

ADD
TO

COOLANT

Radiator Stop Leak

- 325 ml

For many people the first signs of a leaking radiator will be spotting on the driveway or an increase in engine temperature. Radiator leaks can cause irreversible damage to the engine requiring costly repairs if not fixed in time.

Wynn's® Radiator Stop Leak is a premium water-based formula that prevents and seals external leaks in the cooling system and prevents head gasket seepage. This low viscosity product works fast but will not clog. Its buffered inhibitors help prevent corrosion and cavitation. A sealing agent lubricates the water pump, which can improve efficiency, and prolong pump life.

Wynn's® Radiator Stop Leak can be used as a preventative measure or to fix minor leaks & seepages in the radiator.

Features & Benefits:

- Protects against coolant loss
- Seals leaks in radiator & heater cores and prevents head gasket seepage
- Will not clog radiator waterways nor affect temperature sensors
- Compatible with water & glycol, anti-freeze/anti-boil coolants
- Compatible with cooling system components

**STOPS
& PREVENTS
LEAKS**

Directions for Use: With heater control in HOT position. Shake bottle and add contents to the cooling system, CAUTION coolant may be hot. Top up the system with coolant if required. Run engine for approximately 5 minutes to circulate and stop leaks. Contents will treat a cooling system from 6 to 12 litres. Should only be used as a temporary repair for leaks.
